

ABSTRACT OF THE DISCLOSURE

5 A cutting device for cutting four edges out of recording  
medium being fed, includes a side cutter for cutting both side  
edges of the recording medium fed in a feed direction of the  
recording medium; an end cutter for cutting a leading and  
trailing end edges out of the recording medium fed in a feed  
direction of the recording medium; and a recording media feed  
path having a curve or a plurality of curves formed on at  
least a part thereof. The side cutter is arranged on the  
10 corner or corners of the recording media feed path. The four  
edges of the recording medium having an image or the like  
printed can be cut accurately and securely.
